

## KEARNY SCHOOL DISTRICT

**2019 Summer Math Packet  
For students entering grades 1-6**

Dear Parent/Guardian,

As the end of another school year approaches, we are asking your assistance in keeping your child connected to the learning process through the summer months. Your child has the **option** of completing a summer math packet for the grade level he/she will be entering in September. Although it is not mandatory to complete the packet, we strongly encourage your child to do so, since it will better prepare him/her for mathematics during the 2019-2020 school year. The math packets can be found on the district website by going to the Curriculum & Instruction tab and clicking on the Summer Math K-12 link.

Here are some suggestions to keep in mind as your child completes the summer math packet:

- Encourage your child to show his/her work.
- Allow your child to work independently but provide support when necessary.
- Avoid allowing your child to use a calculator.
- The Parent Answer Key, which is available on the district's website, can be used to review your child's work.
- At the end of every summer math packet, you will find some useful websites that you may want to visit with your child to provide extra practice.

Please join the Kearny School District in providing the support and encouragement to make learning an integral part of your child's life. Our goal is to encourage students to maintain their math progress over the summer months in order to maximize their achievement during the coming school year. We wish you and your family an enjoyable summer!

*Flora Encarnacao*
